there are many books that seek to explain lean and agile software that offer theory techniques and examples michael levine s first book a tale of two systems is one of the best synthesizing lean manufacturing and product development with agile software concepts in an engaging business novel however there has been precious little practical guidance for those seeking to change existing organizations to become lean and agile until now mr levine has followed the successful approach of a tale of two systems telling two simultaneous intertwined and contrasting stories to bring organizational transformation to life mary o connell and james wes wesleyan recently engaged to be married share a commitment to lean and agile software they have recently become leaders in two very different companies

one stuck in a slow moving unresponsive process driven quagmire of a software culture the other struggling through the chaos of a sales driven process less swirl together with their wise mentor neville roberts they identify two approaches to making needed changes drive people a top down approach focused on processes and tools and people driven an enablement approach focused on people and organizations mary and wes evaluate their situations and choose approaches that best fit for them and the transformations commence a tale of two transformations differs from many information technology books by grappling with all the complexities of our organizations the people the politics the financials the processes in short the culture from which our lean and agile journeys must begin the change model presented in the flow of the stories is generally applicable and can help anyone thinking about how to improve their organization

myalgic encephalomyelitis chronic fatigue syndrome me cfs is a severe chronic health condition that is often misunderstood or ignored by health establishments the lack of definitive diagnostic markers to separate me cfs patients from the healthy population as well as from other chronic disorders is problematic for both health professionals and researchers a consortium of australian researchers gathered to systematically understand me cfs ranging from a deep analysis of clinical and pathology data to metabolomic profiles and the investigation of mitochondrial function from this broad collaboration a number of compelling insights have arisen that may form the basis of specific serum blood and or urinary biomarkers of me cfs this special edition reports on a conference centred on these biomedical discoveries with other contributions with a translation focus for predictive markers for me cfs diagnosis by supporting health professionals with developments in diagnostics for this condition the patients and their families will hopefully benefit from an improved recognition of the biomedical underpinnings of the condition and will be better able to access the care that is urgently required this special edition contains a mix of speaker submissions and other accepted manuscripts that contributed to our objective of advancing biomedical insights to enable the accurate diagnosis of me cfs
