the self organizing map som is one of the most frequently used architectures for unsupervised artificial neural networks introduced by teuvo kohonen in the 1980s som have been developed as a very powerful method for visualization and unsupervised classification tasks by an active and innovative community of international researchers a number of extensions and modifications have been developed during the last two decades the reason is surely not that the original algorithm was imperfect or inadequate it is rather the universal applicability and easy handling of the som compared to many other network paradigms only a few parameters need to be arranged and thus also for a beginner the network leads to useful and reliable results nevertheless there is scope for improvements and sophisticated new developments as this book impressively demonstrates the number of published applications utilizing the som appears to be unending as the title of this book indicates the reader will benefit from some of the latest theoretical developments and will become acquainted with a number of challenging real world applications our aim in producing this book has been to provide an up to date treatment of the field of self organizing neural networks which will be accessible to researchers practitioners and graduated students from diverse disciplines in academics and industry we are very grateful to the father of the som professor teuvo kohonen for supporting this book and contributing the first chapter
