## Coring and Core Analysis Handbook

1975

this book offers a compact guide to geological core analysis covering both theoretical and practical aspects of geological studies of reservoir cores it equips the reader with the knowledge needed to precisely and accurately analyse cores the book begins by providing a description of a coring plan coring and core sampling and continues with a sample preparation for geological analysis it then goes on to explain how the samples are named classified and integrated in order to understand the geological properties that dictate reservoir characteristics subsequently porosity and permeability data derived from routine experiments are combined to define geological rock types and reduce reservoir heterogeneity sequence stratigraphy is introduced for reservoir zonation core log preparation is also covered allowing reservoirs to be analysed even more accurately as the study of core samples is the only way to accurately gauge reservoir properties this book provides a useful guide for all geologists and engineers working with subsurface samples

the murzuq basin is a large intracratonic sag basin located in southwestern libya exploration efforts started in this vast and remote saharan region already in 1957 and 60 exploratory wells have been drilled to date resulting in over 20 discoveries with around 4 000 million barrels of oil in place most discoveries have been made in ordovician sandstone reservoirs sourced by hot shales of the lower silurian tanezzuft formation oil is already being produced and exported from the area but the basin s total hydrocarbon potential is still poorly understood recent exploration especially the major discovery and initial development of the giant elephant field has greatly increased interest for the area s potential many petroleum geologists and companies now believe that the basin may well develop into a new major hydrocarbon province which will significantly contribute to europe s energy needs in the next decades this book presents papers from a conference held at sebha university on the eastern margins of the murzuq basin in september 1998 the book continues an ongoing series of presentations of the geology of libya but the 25 contributions herein mostly centre on the murzuq basin itself and on nearby areas there are still many unresolved questions

in terms of geological and hydrocarbon exploration in these difficult desert areas but the papers herein will hopefully present a first comprehensive overview of an exciting frontier exploration region about half of the papers are directly related to hydrocarbon exploration and to source rock and reservoir development but a wide variety of other features are also described ranging from palaeontology and biostratigraphy to ore geology and water resources covering the entire geological column from the precambrian to the holocene the book concludes with a bibliography covering all geological aspects of this challenging but very promising frontier area

c k prahalad and gary hamel s 1990 the core competence of the corporation helped redefine traditional ideas of management strategy it did so by focusing companies on one of the key critical thinking skills evaluation in critical thinking evaluation is all about judging the strengths and weaknesses of arguments assessing their reasoning and the relevance or adequateness of the evidence they use for prahalad and hamel companies could gain a competitive edge by evaluating themselves their own strengths and weaknesses by sensitively evaluating core competencies the collective knowledge inside the organization that distinguishes it from other corporations they could target efforts and resources with strategic focus for prahalad and hamel managers need to be able to identify and evaluate their company s unique skill sets and the technologies that distinguish them from others businesses how well they then coordinate these elements defines a company s competitive strength and how quickly it can adapt to new challenges as prahalad and hamel showed in their case studies the critical thinking skill of evaluation knowing what you do best how well you do it and how you might improve is absolutely central to staying ahead of the crowd
