 this is coupled with an increase in population according to the united nations department for economic and social affairs the
 global population is estimated to reach 9.7 billion by 2050 therefore the current situation requires that we develop climate
 smart technologies to improve crop productivity to sustain the ever rising global population current day farmers are
 introducing a considerable amount of agrochemicals to enhance crop productivity indiscriminate agrochemical application has
 altered not only the soil's physical chemical and biological properties but also affected human health through food chain
 contamination cyanobacteria under these changing environmental conditions may help to resolve the problem significantly
 without changing the natural soil properties in spite of their well known stress tolerance potential most of the
 cyanobacterial stress management and signaling pathways are yet to be fully characterized therefore there is an urgent need
 to explore cyanobacterial metabolism under stress as well as their regulatory pathways to exploit them for sustainable
 agriculture in recent decades the application of cyanobacteria has attracted scientists because of uniqueness better
 adaptability and synthetic products diverse cyanobacterial communities with the ability to fix atmospheric nitrogen together
 with their photosynthetic properties have demonstrated their application under field conditions several cyanobacterial
 species have thus been exploited to enhance soil fertility mitigate biotic and abiotic stress and contamination management
 cyanobacterial lifestyle and its applications in biotechnology has been designed to discuss different aspects of
 cyanobacterial physiology with the aim of helping to provide a better understanding of advanced cyanobacterial molecular
 biology and their metabolism to uncover the potential of cyanobacteria in the tailoring of stress smart crops for sustainable
 agriculture chapters include valuable information about the role of cyanobacteria in the evolution of life cyanobacterial
