the crash of an amtrak train near baltimore the collapse of the hyatt hotel in kansas city the incident at three mile island and other large scale technological disasters have provided powerful examples of the ways that communication practices influence the events and decisions that precipitate a disaster these examples have raised ethical questions about the responsibility of writers within agencies epistemological questions about the nature of representation in science and rhetorical questions about the nature of expertise and experience as grounds for judgments about risk in the rhetoric of risk technical documentation in hazardous environments author beverly sauer examines how the dynamic uncertainty of the material environment affects communication in large regulatory industries sauer s analysis focuses specifically on mine safety which provides a rich technical and historical context where problems of rhetorical agency narrative and the negotiation of meaning have visible and tragic outcomes but the questions sauer asks have larger implication for risk and safety how does writing function in large regulatory industries what can we learn from experience why is this experience so difficult to capture in writing what information is lost when agencies rely on written documentation alone given the uncertainties how can we work to improve communication in hazardous and uncertain

environments by exploring how individuals make sense of the material technical and institutional indeterminacies of their work in speech and gesture the rhetoric of risk helps communicators rethink their frequently unquestioned assumptions about workplace discourse and the role of writers in hazardous worksites it is intended for scholars and students in technical writing and communication rhetoric risk analysis and risk communication as well as a wide range of engineering and technical fields concerned with risk safety and uncertainty

previously naval technical documentation standards have been developed using a static top down structured approach that is oriented toward languages such as cobal and fortran because the navy occupational health information management system nohims uses the massachusetts general hospital utility multi programming system mumps language which is dynamic in nature it was felt that new

technical documentation standards had to be developed to accommodate its flexibility this paper describes a transactional approach to documentating the nohims system examples of documentation worksheets as well as a diagram depicting the levels of documentation and their relationship to the transaction center are provided this method of documentation may be advantageous for others who are working with dynamic or evolving systems
