one in which the notion of truth plays a central role it's just semantics is often said dismissively but schlenker shows that semantics the study of meaning is an unsung success of modern linguistics a way to investigate some of the deepest questions about human nature using tools from the empirical and formal sciences drawing on fifty years of research in formal semantics schlenker traces how meaning comes to life after investigating meaning in primate communication he explores how human meanings are built using in some cases sign languages as a guide to the workings of our inner logic machine schlenker explores how these meanings can be enriched by iconicity in sign language and by gestures in spoken language and then turns to more abstract forms of iconicity to understand the meaning of music he concludes by examining paradoxes which being neither true nor false test the very limits of meaning

the tradition descending from frege and russell has typically treated theories of meaning either as theories of meanings propositions expressed or as theories of truth conditions however propositions of the classical sort don't exist and truth conditions can't provide all the information required by a theory of meaning in this book one of the world's leading philosophers of language offers a way out of this dilemma traditionally conceived propositions are denizens of a third realm beyond mind and matter grasped by mysterious platonic intuition as conceived here they are cognitive event types in which agents predicate properties and relations of things in using language in perception and in nonlinguistic thought because of this one's acquaintance with and knowledge of propositions is acquaintance with and knowledge of events of one's cognitive life this view also solves the problem of the unity of the proposition by explaining how propositions can be genuinely representational and therefore bearers of truth the problem in the traditional conception is that sentences utterances and mental states are representational because of the relations they bear to inherently representational platonic complexes of universals and particulars since we have no way of understanding how such structures can be representational independent of interpretations placed on them by agents the problem is unsolvable when so conceived however when propositions are taken to be cognitive event types the order of explanation is reversed and a natural solution emerges propositions are representational because they are constitutively related to inherently representational cognitive acts strikingly original what is meaning is a major advance
