Critical Thinking in Medical-surgical Settings 2001 a man is found brutally murdered and the only possible perpetrator happens to be dead as more killings follow it becomes clear that mass carnage is being planned and organised from beyond the grave the daemon a lethal and seemingly unstoppable computer program is responsible and murder is the least of its capabilities masterminded by a twisted genius the daemon inhabits the systems on which society depends in a world where everyone and everything is online nothing is out of its reach and as we are all connected there is no escape explosive action packed terrifyingly relevant daemon redefines the high concept thriller for the information age

Reading Olympics 1992-04 social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population approximately one quarter of community dwelling americans aged 65 and older

are considered to be socially isolated and a significant proportion of adults in the united states report feeling lonely people who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness such as living alone the loss of family or friends chronic illness and sensory impairments over a life course social isolation and loneliness may be episodic or chronic depending upon an individual s circumstances and perceptions a substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality comparable to other risk factors such as high blood pressure smoking or obesity as older adults are particularly high volume and high frequency users of the health care system there is an opportunity for health care professionals to identify prevent and mitigate the adverse health impacts of social isolation and loneliness in older adults social isolation and loneliness in older adults summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older particularly among low income underserved and vulnerable populations this report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions social isolation and loneliness in older adults considers clinical tools and methodologies better education and training for the health care workforce and dissemination and implementation that will be important for translating research into practice especially as the evidence base for effective interventions continues to flourish
