Value Based Management with Corporate Social Responsibility 2009-08-19

as the first decade of the 21st century winds down we have seen a sea change in society's attitudes toward finance the 1990s can best be described as the decade of shareholder supremacy with each firm trying to outdo the other in their allegiance to shareholder value creation or as it came to be known value based management vbm no one seemed to question this culture as the rising firm valuations translated into vast wealth creation for so many three significant economic events have reshaped how the public feels about an unbridled devotion to vbm and have defined the last decade the dot com bubble in 2000 the infamous accounting scandals of 2001 and the collapse of the credit markets in 2007 2008 in all three of these events the ceos were portrayed as reckless and greedy and wall street went from an object of admiration to an object of scorn the first edition of this book value based management the corporate response to the shareholder revolution was written to help explain the underpinnings of value based management at the time of its publication few questioned whether the concept was the proper thing to do instead the debate was focused on how to implement a vbm program with this new second edition the authors look at vbm after having seen it through good times and bad it is not their intent to play the blame game or point fingers nor is it their intent to provide an impassioned defense of vbm instead they provide an academic appraisal of vbm where it has been where it is now and where they see it going

Chicago Underflow Plan, Final Phase I GDM, Feasibility Report and EA 1986

among global environmental issues climate change has received the largest attention of national and global policy makers researchers industry multilateral banks and ngos climate change is one of the most important global environmental problems with unique characteristics it is global long term up to several centuries and involves complex interactions between climatic environmental economic political institutional and technological pressures it is of great significance to developing countries as all the available knowledge suggests that they and particularly their poorer inhabitants are highly vulnerable to climate impacts the

projected warming of 1.4 to 5.8 °C by 2100 and the related changes in rainfall pattern rise in sea level and increased frequency of extreme events such as drought hurricanes and storms are likely to threaten food security increase fresh water scarcity lead to decline in biodiversity increase occurrence of vector borne diseases cause flooding of coastal settlements etc recognizing the potential threat of severe disruptions the united nations conference on environment and development was organized in 1992 in rio de janeiro brazil to begin to address ways to reduce these impacts which led to the formulation of the un framework convention on climate change this convention and the subsequent kyoto protocol recognize the common but differentiated responsibility of developing and industrialized countries in addressing climate change developing countries thus have a unique role to play in formulating a sound reasoned and well informed response to the threat of climate change
