why do people work hard and take pride in what they do this book a philosophically minded enquiry into practical activity of many different kinds past and present is about what happens when people try to do a good job it asks us to think about the true meaning of skill in the skills society and argues that pure competition is a poor way to achieve quality work sennett suggests instead that there is a craftsman in every human being which can sometimes be enormously motivating and inspiring and can also in other circumstances make individuals obsessive and frustrated the craftsman shows how history has drawn fault lines between craftsman and artist maker and user technique and expression practice and theory and that individuals pride in their work as well as modern society in general suffers from these historical divisions but the past lives of crafts and craftsmen show us ways of working using tools acquiring skills thinking about materials which provide rewarding alternative ways

for people to utilise their talents we need to recognise this if motivations are to be understood and lives made as fulfilling as possible

there is an aspect of boole s work that is not closely related to his treatises in logic or the theory of sets but which is familiar to every student of differential equations this is the algorithm of differential operators which he introduced to facilitate the treatment of linear differential equations if for example we wish to solve the differential equation $ay + by' + cy'' = 0$ the equation is written in the notation $ad^2 + bd + c = 0$ then regarding d as an unknown quantity rather than an operator we solve the algebraic quadratic equation $ad^2 + bd + c = 0$ there are many other situations in which boole in his treatise on differential equations of 1859 pointed out parallels between the properties of the differential operator and its inverse and the rules of algebra british mathematicians in the second half of the nineteenth century were thus again becoming leaders in algorithmic analysis a field in which fifty years earlier they had been badly deficient
