in a broad sense technology is any modification of the natural world made to fulfill human needs or desires although people tend to focus on the most recent technological inventions technology includes a myriad of devices and systems that profoundly affect everyone in modern society technology is pervasive an informed citizenship needs to know what technology is how it works how it is created how it shapes our society and how society influences technological development this understanding depends in large part on an individual level of technological literacy tech tally approaches to assessing technological literacy determines the most viable approaches to assessing technological literacy for students teachers and out of school adults the book examines opportunities and obstacles to developing scientifically valid and broadly applicable assessment instruments for technological literacy in the three target populations the book offers findings and 12 related recommendations that address five critical areas instrument development research on learning computer based assessment methods framework development and public perceptions of technology this book will be of special interest to individuals and groups promoting technological literacy in the united states education and government policy makers in federal and state agencies as well as the education research community

BREAKDOWN OF MATHEMATICS STANDARD LEVEL FOR THE IB DIPLOMA

i was a student for more than 20 years and i have taught hundreds of students since i became a tutor and then a lecturer throughout my study and teaching i have witnessed that many of my classmates or students failed their exams some of them may have used time consuming methods and have not completed all the questions some of them may have had no idea about using appropriate formulae or some of them may have skipped essential steps and just given the final results all these behaviours result in losing marks with these points in mind using proper and efficient methods and giving correct and complete responses to questions play a significant role in sitting for the test as a student it is very important to analyse what the examiners are testing you in their places for example a question worth four marks may be broken down as one mark for showing appropriate method or formula one mark for substituting the corresponding values into the formula one mark for working and one mark for finding correct value at the end in this case to obtain full marks at least four steps are necessary and one or two more steps are recommended to improve the chance of obtaining full marks in this book i summarise all the knowledge required for standard level mathematics for ib diploma some words are written in colour or bold to draw your attention where i think it is important or confusing some pragmatic and efficient methods for tests are introduced by some examples where students often have trouble or make mistakes based on my teaching experience the questions from the papers in the last two years are taken as examples to show a detailed breakdown of

marking including the reasons or explanations for each mark these real test questions may also help you to realise the importance of a section if you find more questions there in some examples a solution is given step by step for a non calculator question and a shortcut by a graphing calculator is also demonstrated since a similar question may appear on paper 2 a textit ti 84 plus silver graphing calculator is used for demonstration because i think it is a little more complicated compared with the casio calculators the relevant pre knowledge is also given in chapter 1 as a brief revision all in all solving questions is just like giving your viewpoints by showing your reasons logically but in a mathematical way wei zhang phd in physics phd in electrical engineering

the implicit function theorem is one of the most important theorems in analysis and its many variants are basic tools in partial differential equations and numerical analysis this second edition of implicit functions and solution mappings presents an updated and more complete picture of the field by including solutions of problems that have been solved since the first edition was published and places old and new results in a broader perspective the purpose of this self contained work is to provide a reference on the topic and to provide a

unified collection of a number of results which are currently scattered throughout the literature updates to this edition include new sections in almost all chapters new exercises and examples updated commentaries to chapters and an enlarged index and references section

this book develops a framework for analyzing the creation and consolidation of democracy different social groups prefer different political institutions because of the way they allocate political power and resources thus democracy is preferred by the majority of citizens but opposed by elites dictatorship nevertheless is not stable when citizens can threaten social disorder and revolution in response when the costs of repression are sufficiently high and promises of concessions are not credible elites may be forced to create democracy by democratizing elites credibly transfer political power to the citizens ensuring social stability democracy consolidates when elites do not have strong incentive to overthrow it these processes depend on 1 the strength of civil society 2 the structure of political institutions 3 the nature of political and economic crises 4 the level of economic inequality 5 the structure of the economy and 6 the form and extent of globalization
