1993 this book contains the papers presented at the 9th international workshop on field programmablelogic and applications fpl 99 hosted by the university of strathclyde in glasgow scotland august 30 september 1 1999 fpl 99 is the ninth in the series of annual fpl workshops the fpl 99 programme committee has been fortunate to have received a large number of high quality papers addressing a wide range of topics from these 33 papers have been selected for presentation at the workshop and a further 32 papers have been accepted for the poster sessions a total of 65 papers from 20 countries are included in this volume fpl is a subject area that attracts researchers from both electronic engine ing and computer science whether we are engaged in research into soft ha ware or hard software seems to be primarily a question of perspective what is unquestionable is that the interaction of groups of researchers from di erent backgrounds results in stimulating and

productive research as we prepare for the new millennium the premier european forum for searchers in eld programmable logic remains the fpl workshop next year the fpl series of workshopswill celebrate its tenth anniversary the contribution of so many overseas researchers has been a particularly attractive feature of these events giving them a truly international perspective while the informal and convivial atmosphere that pervades the workshops have been their hallmark we look forward to preserving these features in the future while continuing to expand the size and quality of the events

User's Guide to CHEAPO II 1978 this little book is conceived as a service to mathematicians attending the 1998 international congress of mathematicians in berlin it presents a comprehensive condensed overview of mathematical activity in berlin from leibniz almost to the present day without however including biographies of living mathematicians since many towering figures in mathematical history worked in berlin most of the chapters of this book are concise biographies these are held together by a few survey articles presenting the overall development of entire periods of scientific life at berlin overlaps between various chapters and differences in style between the chapters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the kronecker weierstrass controversy the book aims at readability rather than scholarly completeness there are no footnotes only references to the individual bibliographies of each chapter still we do hope that the texts brought together here

and written by the various authors for this volume constitute a solid introduction to the history of berlin mathematics
