User-Centric Application Integration in Enterprise Portal Systems

2012

the ever growing number of application scenarios for it systems leads to a significant increase in their number and hence to a level of complexity that has grown tremendously in comparison with early it installations by the mid of the past decade in numerous attempts to integrate these diverging application stacks various prominent methods have emerged in the past most recently the topic of eai which strives to achieve a consolidated view at diverse application systems however the emergence and rise of cloud based services leads to new challenges to deal with usage of offerings from a no further specified cloud appears appealing for it decision makers since it promises cost savings while even enhancing flexibility to quickly respond to changing market needs to further support this idea this work focuses on the aspect of inter organisational networks that are characterised by short setup times and short time to market in order to achieve innovative products emerging from the cooperation between different actors in this context proper backing by dedicated ict components is one of the key challenges this book therefore demonstrates how portal systems acting as intermediary between providers and consumers can be embedded into networked enterprises by providing seamless access to all relevant information to achieve this this book presents a generic architecture that can serve as a blueprint for future implementations for the type of enterprise portals introduced previously and focuses on integration of external services in a user centric manner concentrating on the user and his specific needs to achieve productivity and user satisfaction gains moreover secure communication facilities allow to consider the current application and or user context to control exchange of information between different applications integrated on the portal platform

portal hypertension is the abnormal pathophysiologic state that develops in liver cirrhosis and certain other disorders with characteristic clinical and hemodynamic features there has been great progress in our understanding and management of portal hypertension particularly in the diagnostic and therapeutic approaches the so called banti s syndrome a disorder whose existence had long been questioned is now a well defined portal hypertensive disease the recently introduced doppler flowmetry is currently yielding new information on portal hemodynamics endoscopic sclerotherapy and beta blockers have come to be widely used in the management and prevention of variceal bleeding in spite of all these advances a number of unsolved questions remain such as

whether sclerotherapy pharmacotherapy or surgery is warranted for prevention of bleeding which is more effective as an elective treatment the surgical or endoscopic approach and whether surgical portacaval shunt should be totally replaced by selective shunt operations these new developments and problems are clearly and comprehensively described and discussed by the foremost authorities in 44 chapters which are divided into five sections 1 patho physiology 2 hemodynamic investigations 3 imaging investigations 4 clinical and pathological features and 5 esophageal and gastrointestinal bleeding the primary goal of this monograph to provide a framework of patho physiology of portal hypertension with authoritative descriptions of the clinical and laboratory manifestations of various portal hypertensive disorders has clearly been achieved by these excellent contributions
