wildland fires have an irreplaceable role in sustaining many of our forests shrublands and grasslands they can be used as controlled burns or occur as free burning wildfires and can sometimes be dangerous and destructive to fauna human communities and natural resources through scientific understanding of their behaviour we can develop the tools to reliably use and manage fires across landscapes in ways that are compatible with the constraints of modern society while benefiting the ecosystems the science of wildland fire is incomplete however even the simplest fire behaviours how fast they spread how long they burn and how large they get arise from a dynamical system of physical processes interacting in unexplored ways with heterogeneous biological ecological and meteorological factors across many scales of time and space the physics of heat transfer combustion and ignition for example operate in all fires at millimetre and millisecond scales but wildfires can become conflagrations that burn for months and exceed millions of hectares wildland fire behaviour dynamics principles and processes examines what is known and unknown about wildfire behaviours the authors introduce fire as a dynamical system along with traditional steady state concepts they then break down the system into its primary physical components describe how they depend upon environmental factors and explore system dynamics by constructing and exercising a nonlinear model the limits of modelling and knowledge are discussed throughout but emphasised by review of large fire behaviours advancing knowledge of fire behaviours will require a multidisciplinary approach and rely on quality measurements from experimental research as covered in the final chapters

scientific protocols for fire investigation third edition focuses on the practical application of fundamental scientific principles to determine the causes of fires originally published in 2006 the first edition was very well received by fire investigators and those who work with them since fire investigation is a rapidly evolving field driven by new discoveries about fire behavior the second edition was published in late 2012 this latest fully updated third edition reflects the most recent developments in the field currently serious research is underway to try to understand the role of ventilation in structure fires likewise there is improved understanding of the kinds of errors investigators can make that lead to incorrect determinations of the causes of fires in addition to the scientific aspects the litigation of fire related events is rapidly changing particularly with respect to an investigator s qualifications to serve as an expert witness this book covers these latest developments and ties together the changing standards for fire investigations with the fundamental scientific knowledge presented in

the early chapters of the book the book is intended for those individuals who have recently entered the field of fire investigation and those who are studying fire investigation with a plan to become certified professionals in addition professionals in the insurance industry who hire fire investigators will find this an invaluable resource insurance companies have sustained significant losses by hiring individuals who are not qualified resulting in cases being settled or lost at a cost of millions insurance adjusters and investigators will learn to recognize quality fire investigations and those that are not up to today s standards lastly this book is also for the many attorneys who litigate fire cases written with language and terms that make the science accessible even to the non scientist this new edition will be a welcome resource to any professional involved in fire and arson cases

october 1917 heralded as the culmination of the russian revolution remains a defining moment in world history even a hundred years after the events that led to the emergence of the world s first self proclaimed socialist state debate continues over whether as historian e h carr put it decades ago these earth shaking days were a landmark in the emancipation of mankind from past oppression or a crime and a disaster some things are clear after the implosion of the three hundred year old romanov dynasty as a result of the first world war russia was in crisis one interim government replaced another in the vacuum left by imperial collapse in this monumental and sweeping new account laura engelstein delves into the seven years of chaos surrounding 1917 the war the revolutionary upheaval and the civil strife it provoked these were years of breakdown and brutal violence on all sides punctuated by the decisive turning points of february and october as engelstein proves definitively the struggle for power engaged not only civil society and party leaders but the broad masses of the population and every corner of the far reaching empire well beyond moscow and petrograd yet in addition to the bloodshed they unleashed the revolution and civil war revealed democratic yearnings even if ideas of what constituted democracy differed dramatically into that vacuum left by the romanov collapse rushed long suppressed hopes and dreams about social justice and equality but any possible experiment in self rule was cut short by the october revolution under the banner of true democracy and against all odds the bolshevik triumph resulted in the ruthless repression of all opposition the bolsheviks managed to harness the social breakdown caused by the war and institutionalize violence as a method of state building creating a new society and a new form of power russia in flames offers a compelling narrative of heroic effort and brutal disappointment revealing that what happened during these seven years was both a landmark in the emancipation of russia from past oppression and a world shattering disaster as regimes fall and rise as civil wars erupt as state violence targets civilian populations it is a story that remains profoundly and enduringly relevant

Sunday Times and the New York Times bestseller an epoch defining book Matt Haig if you read just one work of non fiction this year it should probably be this David Sexton Evening Standard selected as a book of the year 2019 by the Sunday Times Spectator and New Statesman a Waterstones paperback of the year and shortlisted for the Foyles Book of the Year 2019 longlisted for the Pen E. O. Wilson Literary Science Writing Award it is worse much worse than you think the slowness of climate change is a fairy tale perhaps as pernicious as the one that says it isn't happening at all and if your anxiety about it is dominated by fears of sea level rise you are barely scratching the surface of what terrors are possible even within the lifetime of a teenager today over the past decades the term anthropocene has climbed into the popular imagination a name given to the geologic era we live in now one defined by human intervention in the life of the planet but however sanguine you might be about the proposition that we have ravaged the natural world which we surely have it is another thing entirely to consider the possibility that we have only provoked it engineering first in ignorance and then in denial a climate system that will now go to war with us for many centuries perhaps until it destroys us in the meantime it will remake us transforming every aspect of the way we live the planet no longer nurturing a dream of abundance but a living nightmare

the story of the Nile expedition is so recent that no word of introduction is necessary to the historical portion of the tale the moral such as it is of the story of the two lads brought up as brothers is never act in haste for repentance is sure to follow in this case great anxiety and unhappiness were caused through a lad acting as he

believed for the best but without consulting those who had every right to a voice in the matter that all came right in the end in no way affects this excellent rule for all might have gone wrong we are often misled by a generous impulse more often perhaps than by an evil one but the consequences may be just as serious in the one case as the other when in trouble you should always go freely to your best friends and natural advisers and lay the case fully before them it may be that if the trouble has arisen from your own fault you will have to bear their temporary displeasure but this is a small thing in comparison with the permanent injury that may arise from acting on your own impulse in most cases cowardice lies at the bottom of concealment and cowardice is of all vices the most contemptible while the fear of the displeasure of a parent has ruined many a boy's life therefore when you are in serious trouble always go to your best friend your father and lay the case frankly and honestly before him for you may be sure that present displeasure and even punishment are but small things in comparison with the trouble that may arise from trying to get out of the difficulty in other ways
